

Vermont SIM Initiative

Award
\$45 million

Period of performance
October 1, 2013 – June 30, 2017

Pre-SIM Landscape

Strategies

Symbols represent strategies that build on efforts that pre-date SIM.

Expand ACO models
Vermont piloted new Shared Savings Programs for its Medicaid and commercially insured populations, that later evolved into an all-payer ACO model. +

Support practice transformation
Vermont supported providers via innovation grants and learning collaboratives.

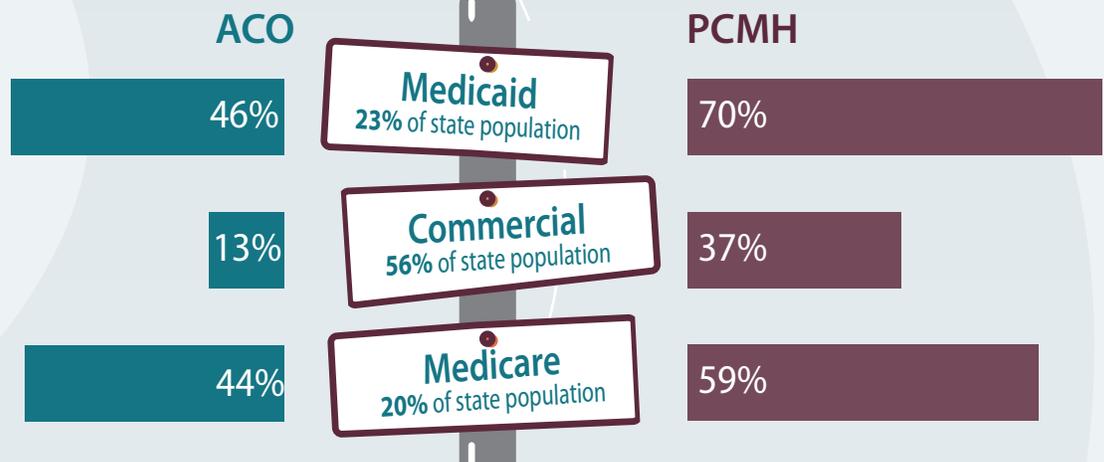

Incentivize quality
Vermont implemented a pay-for-performance program to improve quality and better support Blueprint for Health providers financially. ❖

Strengthen health data infrastructure
Vermont invested in EHR expansion and HIE connectivity and implemented a behavioral health data repository, event notification system, and telehealth pilots. ◆

Reach

as of December 2016

Nearly half (46%) of Vermont's total Medicaid population was served by the state's ACO model.

Impact on Medicaid Population

- ✔ = Performed better than the CG
- ✘ = Performed worse than the CG
- = No statistically significant change

Goals

Better Care Coordination

Increased Quality of Care

Appropriate Utilization of Services

Lower Total Spending

Improved Population Health

Shared Savings Program

- ✔ Specialty provider visits
Decreases in specialty care visits could indicate conditions are being managed.
- Mental health follow-up visit within 7 days/30 days of mental illness inpatient hospital admission
- Primary care provider visits
The ACO model was expected to increase primary care visits to prevent inappropriate use of higher-cost settings.

- ✔ Young child developmental screenings
- Adolescent well-care visits
- Initiation/engagement of treatment after episode of alcohol and other drug dependence

- ✔ ED visits
ACOs targeted reducing unnecessary use of the ED to help control costs.
- ✔ Inpatient admissions
- 30-day readmissions

- ✔ Inpatient PBPM spending
- ✔ Professional PBPM spending
- ✔ Total PBPM spending
While total and inpatient facility PBPM spending increased, the increase was lower for Medicaid patients in the Medicaid SSP group than the comparison group.

Vermont explored the Accountable Communities for Health model, which focuses on all patients' health within a geographic area. The state included population health measures in its new All-Payer ACO Model.

Limitations

Because the Medicaid SSP builds on and complements Vermont's strong existing health reform initiatives, including the Blueprint for Health, positive results cannot be attributed solely to ACO and SIM Initiative efforts.

Attributing comparison group providers who participated in the commercial SSP could bias the results to the null. Attributing comparison group providers who chose not to participate in any ACO could bias the results away from the null.

Population changes (e.g., Medicaid expansion) may have affected the Medicaid SSP and comparison groups differently. This was mitigated through propensity score weighting of the samples each year to balance on key characteristics.

Lessons Learned

- ✔ Vermont's efforts were accelerated by the prior foundation of reforms and the existing infrastructure.
- ✔ Wide-scale, state-based reforms require willingness to adapt to evolving priorities and needs.
- ✔ Stakeholder engagement requires significant staff resources and is critical to gaining buy-in and sustaining momentum for reforms.
